- **Use in Non-Fiction (100 words):**

In the aftermath of World War I, Germany was required to pay massive reparations to the Allied powers. These payments, imposed by the Treaty of Versailles, were intended

to compensate for the economic damages caused during the war. However, the financial burden of these reparations led to hyperinflation in Germany and contributed to the rise of nationalist movements. Economic historians often cite reparations as a critical example of how post-conflict economic measures can influence geopolitical landscapes and social stability in the years that follow major conflicts.

- **Use in Non-Fiction (100 words):**

Coquetry is often seen in classic literature, especially in female characters navigating male-dominated social environments. In Jane Austen's novels, for example, coquetry plays a subtle but essential role in courtship rituals. While modern feminism may critique the trope, historically, it was one of the few socially acceptable means for women to

assert charm and agency. Scholars have debated whether coquetry was empowering or limiting, as it often involved manipulation for survival in patriarchal societies.

- **Use in Non-Fiction (100 words):**

Though the term *orgulous* has largely fallen out of modern English, it still appears in classical literature and epic poetry. For instance, in medieval romances, knights were described as *orgulous* warriors—confident to a fault. Understanding this word provides valuable insight into how pride and arrogance were depicted as both virtues and fatal flaws in older literary contexts. Scholars of historical literature often revisit such words to decode the attitudes and values of the era.

For example, a politician giving a snitty reply during a press conference often indicates emotional defensiveness. Though not suitable for formal academic writing, the word effectively conveys tone and attitude in op-eds, magazine articles, or blogs that balance casual and critical tone.

The term “highfalutin” often appears in critiques of language that is unnecessarily complex or self-important. For example, when scholars use elaborate jargon to impress rather than clarify, readers may label it highfalutin.
