1. Perpetual (लगातार) (Adjective) (per-PECH-oo-uhl) (Formal)

- **Meaning (English):** Continuing forever or for a very long time without stopping.
- **Meaning (Hindi):** जो कभी खत्म न हो; निरंतर।

- **Use in Non-Fiction (100 words):**

In environmental studies, the concept of a perpetual energy source is highly idealized. Wind and solar energy are often described as perpetual in contrast to fossil fuels. However, "perpetual" here doesn't mean eternal without maintenance but sustainable over generations. Philosophers also use the term to explain human pursuits like the

perpetual search for meaning or happiness, which never quite ends, adapting over time as we age. In contracts and legal documents, perpetual clauses bind agreements beyond the typical duration, indicating a long-lasting commitment, often challenging to break.

- **Correct and Incorrect Usage:**

-  The region is under perpetual drought. (क्षेत्र लगातार सूखे की चपेट में है।)
-  She is a perpetual singer. (Incorrect – "perpetual" doesn't describe people unless indicating a recurring state.)

In astronomy, perturbation refers to the slight changes in the orbit of a celestial body due to gravitational influences. In psychology, it means mental disturbance — anxiety or restlessness triggered by trauma, stress, or sudden change. The term also appears in control systems and quantum theory to describe deviations from an ideal state. It's versatile and powerful in both scientific and emotional contexts.

- **Meaning (English):** Capable of being satisfied.

- **Use in Non-Fiction (100 words):**

The term "satiabile" appears in psychology when studying human needs and desires. For example, basic physiological needs like hunger or thirst are considered satiable. But emotional needs, like validation or ambition, can often drift toward insatiability. Marketing studies also examine whether consumer desires are satiable or endlessly expanding. The key to well-being lies in recognizing which needs are truly satiable and working toward fulfilling those without overindulgence. The difference between a fulfilled life and a frustrated one can be traced to how we treat our satiable vs. insatiable desires.

- **Correct and Incorrect Usage:**

-  His appetite was easily satiable. (उसकी भूख आसानी से शांत हो जाती थी।)
-  She is a satiable girl. (Incorrect — "satiable" should not describe a person directly.)

Historically, philosophers like Aristotle viewed leisure as essential for contemplation and intellectual growth.
