Becoming accustomed to a new lifestyle takes time and consistent effort. Whether it's adapting to a different diet, learning a new language, or following a daily routine, our brains are wired to seek comfort in familiarity. In psychology, this is linked to the concept of neural adaptation, where repeated exposure to stimuli leads to reduced responses. This helps people form habits and adjust to changes. Students, for example, become accustomed to study patterns before exams. In corporate training, managers ensure

new employees get accustomed to the work culture. However, breaking out of negative patterns requires deliberate action.
