- **Use in Non-Fiction (100 words):**

During economic downturns, governments have often lent large sums to struggling sectors to stabilize markets. For example, during the 2008 financial crisis, central banks lent billions to financial institutions. Lending, in this context, serves as a temporary measure to prevent collapse. However, when such lending becomes recurring without accountability, it may foster dependency. Hence, lending must be strategic, not impulsive. It should be based on assessment, sustainability, and measurable outcomes.

Modern media often panders to audiences' basest instincts, promoting sensationalism over substance. Instead of focusing on authentic journalism, some outlets choose to pander to viewer biases, amplifying outrage or fear to increase ratings. This undermines

Writers often conjure entire worlds using only words, tapping into human imagination's limitless potential. J.K. Rowling conjured Hogwarts from her mind, giving generations of readers a shared mythical space. Beyond fantasy, leaders conjure hope during times of crisis by painting a vision of the future. However, conjuring illusions—be it in propaganda

"Reckoning" also appears in literature as a symbolic return to truth or consequence. The phrase "a day of reckoning" often implies inevitable judgment or realization. Reckoning is a blend of intuition and rational

Political opponents often use taunts to undermine credibility. In sports, taunts can disrupt focus or provoke retaliation. However, well-crafted satire may

blur the line between a taunt and a social commentary. Responsible expression is key to preventing taunts from becoming tools of bullying or incitement.
